

DARELL RANGGA PUTRA RACHMAN

PHP BACK END DEVELOPER

Bekasi, Indonesia | darrellrangga@gmail.com | +62 8978638973
darellrangga.me | LinkedIn | GitHub

Availability: Independent Contractor / Fully Remote (Ready to collaborate with distributed, international teams)

PROFESSIONAL SUMMARY

Analytical PHP Back End Developer specializing in building scalable server-side applications, evaluating complex backend code, and contributing to data-driven AI software projects. Extensive hands-on experience utilizing modern frameworks (Laravel 12), Node.js, and implementing rigorous MySQL database optimization techniques. Demonstrated commitment to engineering excellence through strict adherence to design patterns, comprehensive PHPUnit testing, and articulating clear technical documentation for complex system reasoning.

TECHNICAL SKILLS

- Backend & API:** PHP (Laravel 11/12), Node.js, Python, REST API Architecture, Secure Integration Best Practices
- Database Optimization:** MySQL/MariaDB, PostgreSQL, Complex Query Refactoring, Relational Indexing
- Code Quality & Evaluation:** Code Review, Design Patterns, PHPUnit, Technical Documentation, Logical Accuracy Analysis
- AI & Data Projects:** Scikit-Learn, Pandas, NumPy, ONNX Runtime, Data-Driven Software Integrations

WORK EXPERIENCE

PHP Back End Developer | Contract / Remote

Dec 2024 – Present

- [Backend Architecture & Scalability]** Engineered high-performance data processing systems and REST APIs, achieving zero downtime for 500+ concurrent users during peak transactional periods, by building scalable server-side applications in PHP (Laravel 12) and Node.js while applying advanced MySQL and database optimization techniques.
- [Code Quality & Evaluation]** Ensured 100% adherence to enterprise-grade code quality and security standards across 7+ backend architectures, reducing post-release logical bugs by 40%, by rigorously reviewing and evaluating backend code for logical accuracy, enforcing strict design patterns, and committing to comprehensive PHPUnit testing workflows.
- [AI Integration & Technical Communication]** Pioneered the deployment of edge-AI predictive systems, achieving zero-latency inferences for complex risk analysis models, by contributing domain expertise to data-driven software projects (Python/Scikit-Learn) and producing clear technical documentation to articulate complex concepts to diverse audiences.
- [Remote Collaboration & Task Management]** Streamlined asynchronous backend development lifecycles, maintaining a 100% on-time delivery rate, by proactively managing tasks independently in a fully remote environment and adopting CI/CD Git workflows that mirror the collaborative best practices of distributed, international teams.

COMPLEX BACK END & DATA-DRIVEN PROJECTS

SRB Motor V3 | Scalable Dealership REST API

Focus: PHP (Laravel 12), MySQL Optimization, Design Patterns

- Solved complex backend logic by architecting a scalable Laravel 12 API infrastructure, specifically adapting modern middleware registration flows directly within application bootstrapping logic to replace legacy Kernel files.
- Reviewed and refactored underlying MySQL data structures to optimize financial reporting, applying relational indexing and efficient Eloquent ORM queries to dramatically reduce server response times.

TirtaSense AI | Edge-Inference Data Platform

Focus: Python, Scikit-Learn, Next-Gen Technology Integration

- Contributed structural backend expertise to a data-driven software project, bridging raw Machine Learning models (Scikit-Learn) with seamless server-side execution.
- Documented technical pipeline flows, ensuring non-technical stakeholders could understand the logical reasoning behind the 7-factor predictive AI analysis outputs.

Tunggal Jaya Transport | Distributed Booking Engine

Focus: Node.js, API Integrations, Logical Accuracy

- Evaluated and mapped complex transactional logic to prevent race conditions during high-traffic ticket booking events, applying strict backend validation rules.
- Executed best practices in third-party API integrations, securely bridging internal PHP systems with external payment gateways and asynchronous WhatsApp messaging services.

EDUCATION

Bachelor of Information Systems | Universitas Bina Sarana Informatika

Sep 2024 – Present

Focus: Advanced Database Systems, Software Engineering, Algorithm Design (Cumulative GPA: 4.00/4.00)
